PREFACE

IN spite of war conditions and the many difficulties involved it was decided to continue with the preparation of the seventh edition of *American Men of Science*. As a large number of scientific workers are temporarily engaged in war work and addresses are frequently changed, those given in the directory can not in many cases be considered as permanent addresses. However, the editor believes that the advantages of issuing a revised directory outweighed the disadvantages, and that, all things considered, it would be a contribution to the war effort.

The third edition of *American Men of Science* was in course of preparation at the time war was declared in 1914 when the work was postponed. It was resumed in 1916, only again to be interrupted by the entry of the United States in 1917, so that this edition did not appear until May, 1921.

The editor is under great obligations to a large number of scientific men who have assisted in the selection of names to be included in the book and to all those who have supplied the material and corrected proof of the biographical sketches. Among those who have assisted in the compilation are: Mrs. E. E. Ross, Miss Dorothy Bechtold, Mrs. Jane W. Bitzer, Mrs. Ruth H. Little, Mrs. Mary Jane McMullen and Miss Caroline M. Klein.

A selection has again been made by their colleagues of the two hundred and fifty who in the course of five years have attained a position among our leading scientific workers. These have been selected by the same methods as those used in previous editions. It had been planned that a committee appointed by the American Association for the Advancement of Science should make a thorough study of these methods, recommending any change that it would be desirable to make. However, owing to the work that the various members had undertaken for the government the committee was unable to function.

The directory, of which the first edition included 4,000 biographical sketches, includes about 34,000 names. Every effort has been made to make it as complete and authoritative as possible.

PREFACE TO THE FIRST EDITION

This biographical directory of American men of science was begun as a manuscript reference list for the Carnegie Institution of Washington, which made a appropriation of $1,000 toward the clerical and office expenses. It is hoped that th publication will be a contribution to the organization of science in America. Ther is here given for the first time a fairly complete survey of the scientific activity o a country at a given period. As a reference book for the field it covers, it may be even more useful in academic circles than *Minerva* or *Who's Who in America.* But the chief service it should render is to make men of science acquainted with one another and with one another's work. There scarcely exist among scientific men the recognition of common interest and the spirit of cooperation which would help to give science the place it should have in the community. It is fully as important for the nation as for men of science that scientific work should be adequately recognized and supported. We are consequently in the fortunate position of knowing that whatever we do to promote our own interests is at the same time a service to the community and to the world.

There are included in the directory the records of more than four thousand men of science, and it is believed that the entries are tolerably complete for those in North America who have carried on research work in the natural and exact sciences. Some are admitted who are supposed to have advanced science by teaching, by administrative work, or by the preparation of text-books and compilations. There are also some whose work has been chiefly in engineering, medicine or other applied sciences, and a few whose work is in education, economics or other subjects not commonly included under the exact and natural sciences. But the book does not profess to cover these fields. The names are included because they are supposed to represent work that has contributed to the advancement of pure science—the term being used in the narrower sense—or because they are found in the membership lists of certain national societies. * * * * *

A star is prefixed to the subject of research in the case of about a thousand of the biographical notes. These are the thousand students of the natural and exact sciences in the United States whose work is supposed to be the most important. In each of the twelve principal sciences the names were arranged in the order of merit by ten leading students of the science. The average positions and the probable errors were then calculated, so that in each science the order of merit was determined together with its validity. The names were then combined in one list by interpolation, the numbers in each science being taken approximately proportional to the total number of workers in that science. The thousand are distributed among the sciences as follows: Chemistry, 175; physics, 150; zoology, 150; botany, 100; geology, 100; mathematics, 80; pathology, 60; astronomy, 50; psychology, 50; physiology, 40; anatomy, 25; anthropology, 20. The star means that the subject of the biographical sketch is probably among the leading thousand students of science of the United States; but its absence does not necessarily mean that the subject

of the sketch does not belong in this group, as the name may not have been considered in making the arrangements.

My object in determining the thousand leading American men of science was to secure a group for scientific study. I have also selected for this purpose the thousand leading men in the history of the world arranged in the order of eminence, and I am selecting a thousand students of Columbia University. My original interest in this work of reference was to secure data for a statistical study of the conditions, performance, traits, etc., of a large group of men of science, and I had intended to include the results of this study in the book. It seems, however, unwise to postpone the publication of the biographical sketches until the scientific study has been completed.[1]

I am under unusual obligations to a large number of men of science for assistance in this work. I should be glad to give a list of about two hundred to whom I am particularly indebted, but perhaps some of them would prefer not to have their names mentioned. I have been assisted in the compilation by Mr. Wm. Harper Davis, then assistant in psychology at Columbia University and now assistant professor in Lehigh University; by Dr. H. D. Marsh, then scholar in psychology at Columbia University and now instructor in Ohio Wesleyan University; by Miss M. C. Ennis; and most of all by Dr. Vivian A. C. Henmon, now lecturer in psychology at Columbia University. So much completeness and accuracy as the work may have is largely due to them.

Jour. of Psychol.*, 14: 310–328, 1903. A further series of articles, which is now nearly ready, will probably be printed in *Science*. *Cf.* in regard to the other groups 'A Statistical Study of Eminent Men,' *Pop. Sci.
